#### Velocity:

Imagine we have a 36-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{*sprint duration*}}{\text{*velocity*}} = \frac{36}{20} = 1.8$$

**Burndown chart:**

A burndown chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time. Here is the Burndown chart for our project “*Pediatric Allergies Unveiled*”.
